**Border Layout :**

```java
import java.awt.*;
class prac2 extends Frame{
    prac2()
    {
        setSize(600,600);
        setVisible(true);
        setTitle("The Frame Layout Code");
        setLocation(700,350);

        BorderLayout bl = new BorderLayout(20,20);
        Button b1 = new Button("Save");
        add(b1,bl.NORTH);
        Button b2 = new Button("Clear");
        add(b2,bl.SOUTH);
        Button b3 = new Button("Cancel");
        add(b3,bl.EAST);
        Button b4 = new Button("Submit");
        add(b4,bl.WEST);
        Label l = new Label("Welcome to Advance Java",Label.CENTER);
        add(l,bl.CENTER);
    }
    public static void main(String args[])
    {
        prac2 p = new prac2();
    }
}
```

Grid Layout :

```java
import java.awt.*;
class practical2 extends Frame
{
        practical2()
        {
                setVisible(true);
                setSize(500,500);
                setTitle("Example of Grid Layout");

                GridLayout gl = new GridLayout(5,5);

                Label ll= new Label("Name : ");
                add(ll);

                TextField name = new TextField();
                add(name);

                Label l = new Label("Username : ");
                add(l);

                TextField user = new TextField();
                add(user);

                Label ll1 = new Label("Email : ");
                add(ll1);

                TextField email = new TextField();
                add(email);

                Label l1 = new Label("Password : ");
                add(l1);

                TextField pass = new TextField();
                pass.setEchoChar('@');
                add(pass);

                Button b = new Button("SUBMIT");
                add(b);

                setLayout(gl);
        }
```

```
public static void main(String args[])
{
        practical2 pl = new practical2();
}
}
```

To Present given output :

```java
import java.awt.*;

public class gridbag extends Frame{
    public gridbag() {

                setVisible(true);
                setSize(300, 300);
                setTitle("GridBag Layout Example");

                GridBagLayout grid = new GridBagLayout();
        GridBagConstraints gbc = new GridBagConstraints();
        setLayout(grid);

        GridBagLayout layout = new GridBagLayout();
                this.setLayout(layout);

                gbc.gridx = 0;
                gbc.gridy = 0;
                this.add(new Button("Button One"), gbc);

                gbc.gridx = 1;
                gbc.gridy = 0;
                this.add(new Button("Button two"), gbc);

                gbc.gridx = 0;
                gbc.gridy = 1;
                this.add(new Button("Button Three"), gbc);

                gbc.gridx = 1;
                gbc.gridy = 1;
                this.add(new Button("Button Four"), gbc);
        }
        public static void main(String[] args) {
        gridbag a = new gridbag();
    }
}
```

GridBag Layout Example   — □ ✕

Button One	Button two
Button Three	Button Four
